T7 Release 12.0	
XML Report Reference Manual	Vers. 3

Introduction	Page 36

## **1 Introduction**

This document describes all the reports based on T7 trading data for both the Cash and Derivatives markets.

This document is intended for the staff dealing with reports. The purpose of the XML Report Reference Manual is

- . to explain the content of the reports, and
- . to describe each report in detail

Apart from the detailed description of the XML reports this document also contains additional information related to generic text reports.

In addition to the trading reports, this document also contains fees related reports for the Cash Markets. Eurex participants need to refer to the clearing documentation for fees and clearing related reports. For Eurex the clearing documentation is published on the Eurex Clearing webpage: [www.eurexclearing.com](http://www.eurexclearing.com)

Please note that all reports are provided exclusively via the Common Report Engine.

## 2 XML Trading Reports Concepts

In this chapter the main concepts of the XML Reports offered by T7 are explained.

### 2.1 XML Report Layout

The XML report layout consists of the basic elements *structures*, *structure members*, and *data types*.

#### 2.1.1 Structures

*Structures* are ordered collections of structure members and may contain fields and/or sub structures as members, forming a structure tree. On the top level (the root of each structure tree) there is the main report structure.

Most structures are defined as a part of one report. Structures used in several reports are called *common structures*.

Naming conventions for structures are:

<i>reportName</i>	Main structure of a report
<i>reportName***Grp</i>	Sub structure of a report
<i>reportName***KeyGrp</i>	Sub structure of a report which contains key fields

#### 2.1.2 Structure Members

A *structure member* is either a field or another (sub-)structure. A structure member may be enriched by attributes to define report specific properties.

Fields are defined by their data type and share the name of their data type. Sub structures may occur once or multiple times in a structure. The name of a sub structure member is equal to the sub structure name.

Each field and structure occurs at a specific place in the sequence of fields in the sub structure tree of a report. Sub structure can represent an exception, in the sense that they can occur multiple times.

Structure members may be mandatory or optional. Optional members may be omitted in the XML report.

#### 2.1.3 Data Types

*Data types* describe context-independent properties of a field, like its format and length. The format of a data type may be alphanumeric, numeric, or signed numeric.

These properties are independent of the report where a field of this data type occurs. Since a field in a structure must have the same name as its data type, this implies that two fields with the same name always have the same data type.

#### 2.1.4 Rules for creating the XML Structure

##### 2.1.4.1 Main Report Structure

The report XML structure is enclosed in the tag

---

```

<rptName>
  <rptHeader>
    ...
  </rptHeader>
  <rptNameGrp>
    ...
  </rptNameGrp>
</rptName>

```

### 2.1.4.2 Sub structures

Sub structures are written to

```

<structureName>
  ...
</structureName>

```

The structure members occur in the sequence as they are defined in the XML report layout. Optional members may be omitted, if they contain no data.

In case of a multiple occurrence, the <structureName> element is repeated.

### 2.1.4.3 Field Values

Field values are written as

```
<fieldName>fieldValue</fieldName>
```

or, if no value is given for a mandatory field,

```
<fieldName/>
```

Optional fields are omitted if no value is given.

Alphanumeric field values are written to the XML report with their complete field length.

Examples:

```
<instNam>DBO</instNam>
```

```
<text>430-11172 </text>
```

Numeric values with precision 0 are written in the format DD...D without leading zeroes (D denotes a digit 0, 1, ..., 9).

Example:

```
<sumTrnLngQty>558</sumTrnLngQty>
```

Numeric values with precision > 0 are written in the format DD...D.D...D, where the number of trailing digits is given by the precision.

Example:

```
<valPerTick>1.0000</valPerTick>
```

Signed numeric values are prefixed with a plus ('+') or minus ('-') sign.

Example:

```
<sumPrmVmarAmnt>-88880.00</sumPrmVmarAmnt>
```

## 2.1.5 Rules for Text Reports

The text reports created from the XML reports serve to display the contained data in a human readable format. Only the XML reports are suitable for automatic processing.

Any form of automatic text report processing is strictly not advisable, e.g. by parsing data from the text report content.

The following sections describe some generic rules how the layout of the text reports is determined from the XML report structure.

### 2.1.5.1 Generic Text Report Structure

The creation of generic text reports uses the following rules:

- The global layout of a generic text report is determined by the XML report data structure
- Data rows are shown in the sequence defined in the XML report
- Fields are shown in the sequence defined in the model
- Column widths are determined by the maximum of heading length and data field length
- Column headings are written into one line
- Spacing between columns is always one
- Underlines (indicating the column width) are provided for the field width of the first row
- Lines are wrapped, if they would be longer than 132 characters.
- Starting position for wrapped lines is one character indented from second field on the first line

### 2.1.5.2 Field Values

The display of field values adheres to the following rules:

- The field value display is determined by the field specific format, independent of the report context. (i.e., the same field has the same format in all reports)
  - The field column heading is determined by the field, independent of the report context (i.e., the same field has the same column heading in all reports).
  - Alphanumeric values are displayed left-aligned with the original value retrieved from the XML Report data
  - Numeric values are displayed right-aligned according to their field specific display format.
-

T7 Release 12.0	
XML Report Reference Manual	Vers. 3
	03.11.2023
XML Trading Reports Concepts	Page 40

The specific rules for numeric values are

- The decimal separator is a point
- No leading zeroes are displayed
- Per Default “minus signs” are written as postfix of the number (e.g. 123.45-)
- It is possible to have a thousand separator for the text format (e.g. 12,345,678.9)
- The decimal digits given by the field precision varies depending on the format of the report (Please refer to section 5.1 for examples):
  - Old Report Format:  
All decimal digits given by the field precision are displayed (e.g. **1.200** for precision 3)
  - New Report Format:  
All decimal digits given by the field precision are displayed (e.g. **1.2** for precision 3) with the exception of zeroes. In case there are only zeroes as decimal places, the decimal places will not be explicitly stated.

## 2.2 Common Report Engine

The Common Report Engine is the exclusive source for report files for participants. It is an FTP based on an SFTP report server that allows participants to easily retrieve all of their reports from a single source.

All transactional and participant specific reports are available in a participant-specific directory structure. Non-transactional and non-participant specific reports and files are available in the public area. Such reports are tagged as **CRE Area: public** in this manual.

The Common Report Engine can be accessed via leased line connectivity or via the Internet.

## 2.3 Product and Instrument Reference Data

T7 provides the product and instrument reference data on the T7 Reference Data Interface (T7 RDI) and in form of XML files as T7 Reference Data Files (T7 RDF), both in FIXML layout.

The T7 RDF files are available on the Common Report Engine (CRE) in the Public Area.

*T7 instrument specific information, such as ISIN, is present in Tag 455 <SecurityAltID> when Tag 456 <SecurityAltIDSource> has the value 4.*

*The Market and Reference Data Interfaces Manual available on the Eurex website, provides more details about the layout of the T7 RDI and T7 RDF messages.*

## **3 Introduction to XML Reports**

### **3.1 XML Report Characteristics**

The XML report descriptions contain the following information:

#### **Description**

A textual description of the functional contents of the report.

#### **Frequency**

The frequency or the specific events at which the report is created.

#### **Availability**

The group of members (e.g. all members, clearing members) to which the report is available.

Availability for “all members” indicates that this report is available to all the members whose data is present in these reports or the report do not contain member specific header.

#### **XML Report Structure**

A description of the composition of groups and tags that are used with the XML report. Underlined items represent groups; the contained tags are identified by indent level. Additional information is provided on the cardinality of subgroups. Please refer to *section 3.2* for a description of cardinalities.

#### **M/O**

A usage code to indicate whether a report tag is mandatory or optional. Please refer to *section 3.3* for a detailed description.

#### **Text Report Heading**

The heading of each tag when printed in a text report. The heading depends on the tag, but may be defined different in a specific report context. Tags bound together in a group may be concatenated under one heading.

If the text report heading is marked “(XML only)”, the tag content is not written into the text report.

#### **Text Report Structure**

A generic description of the layout that is used with the text report. Each text report field is printed once with his heading and the generic text format which is used to display the value. Alphanumeric values are filled up with X, according to the field length. Numeric values are filled up with 9, together with thousand separators, decimal points and signs if applicable. Please remark that the layout of text reports may be subject to change without further notice.

---

### 3.2 Structure cardinality

Any sub structure may be contained zero, one or multiple times in a structure.

The XML report descriptions contains a cardinality information for each structure in the form

structure

or

structure, repeated *cardinality* times:

Cardinality	Description
<i>(none)</i>	Substructure occurs exactly one time
<i>m</i>	Substructure occurs exactly <i>m</i> times
<i>m ... n</i>	Substructure occurs minimal <i>m</i> , maximal <i>n</i> times
<i>m ... variable</i>	Substructure occurs <i>m</i> to any number times

Table 3.1 - Structure Cardinality Descriptors

### 3.3 Usage Code

The XML report descriptions contain usage codes for each tag. These codes provide information on whether a tag is mandatory or optional. *Table 3.2* below lists all applicable usage codes and provides a description.

Usage Code	Explicit	Field Usage Description
m	mandatory	Tag occurs always (but may contain an empty string)
o	optional	Tag may be omitted

Table 3.2 - Field Usage Codes

### 3.4 Reports per T7 Trading Instance

For members trading on various the T7 instances, reports will be provided separately for each T7 instance.

The report ID and the report layout will be common. Reports can be distinguished by the corresponding T7 trading instance specific environment number in the report file name (e.g., “90” for T7 Production Standard, “60” for T7 Börse Frankfurt Production).

## 4 XML Report Descriptions

The description of the XML Reports and Tags in this document is based on the configuration

 This report is sorted by trading currency, account type, instrument and fee type. For each instrument the totals are shown for actual payable fees. For each trading currency, converted into billing currency by the mentioned exchange rate, these totals are accumulated by instrument and account type of an exchange member. This report provides also a sum of order volume and number of orders.  
 This report is available for Clearing Members listing an accumulation of the information of their Non-Clearing Members.  
 This report is available only for cash markets.

**Frequency** Daily.

**Availability** Member Report.
