SSF Trading Opportunities

Hedging

You can protect your portfolio against adverse market moves by selling or buying SSFs rather than equities.

Leverage

Use a much smaller capital outlay to achieve the same amount of exposure

Pairs trading

You know there is a positive correlation in the daily price movement between two stocks. When a negative correlation occurs you go short on the outperforming stock and long on the underperforming one, expecting that the "spread" between the two would eventually converge.

130/30 Strategy

A 130/30 ratio implies shorting stocks up to 30 percent of the portfolio value and then using the funds to take a long position in the stocks you expect to outperform the market.

Cash equitization

A fund manager knows he will receive EUR 50 million to invest in European equities in the near future and is concerned that the market will be higher by the time he receives the cash. Therefore he buys SSFs to forward fix the cost.
