

T7 Release 13.0

Derivatives Market
Focus call

12 September 2024

Agenda

- 1 Overview and Introduction
- 2 Enhanced Drop Copy Service
- 3 BTRF Calendar Roll and Optional Early Termination
- 4 Short Code and Algo ID solution 2.0
- 5 ISV and Software Registration Process via Member Section
- 6 Further Changes & Enhancements

1 Overview and Introduction

Overview of Eurex T7 Release 13.0

Main Features	Enhanced Drop Copy Service
	BTRF Calendar Roll and Optional Early Termination
	ISV and Software Registration Process via Member Section

Reg-Feature	Enhancements of the Short Code and Algo ID Solution
--------------------	---

Backwards compatibility for trading interfaces	NO
Backwards compatibility for market and reference data interfaces	NO

Introduction Schedule T7 Release 13.0

- **Version 1**
- **Version 2 (optional)**
- **Version 3 (optional)**
- All documents are available on www.eurex.com under: *Support > Initiatives & Releases > T7 Releases > T7 Release 13.0*

2 Enhanced Drop Copy Service

Enhanced Drop Copy Service

New T7 Risk Management & Reconciliation Service

Motivation

Provide order information to the trading participants and their clearers via new **Enhanced Drop Copy** interface

Complete Overview

Trading participants can facilitate measures to obtain a **complete overview of own order book**

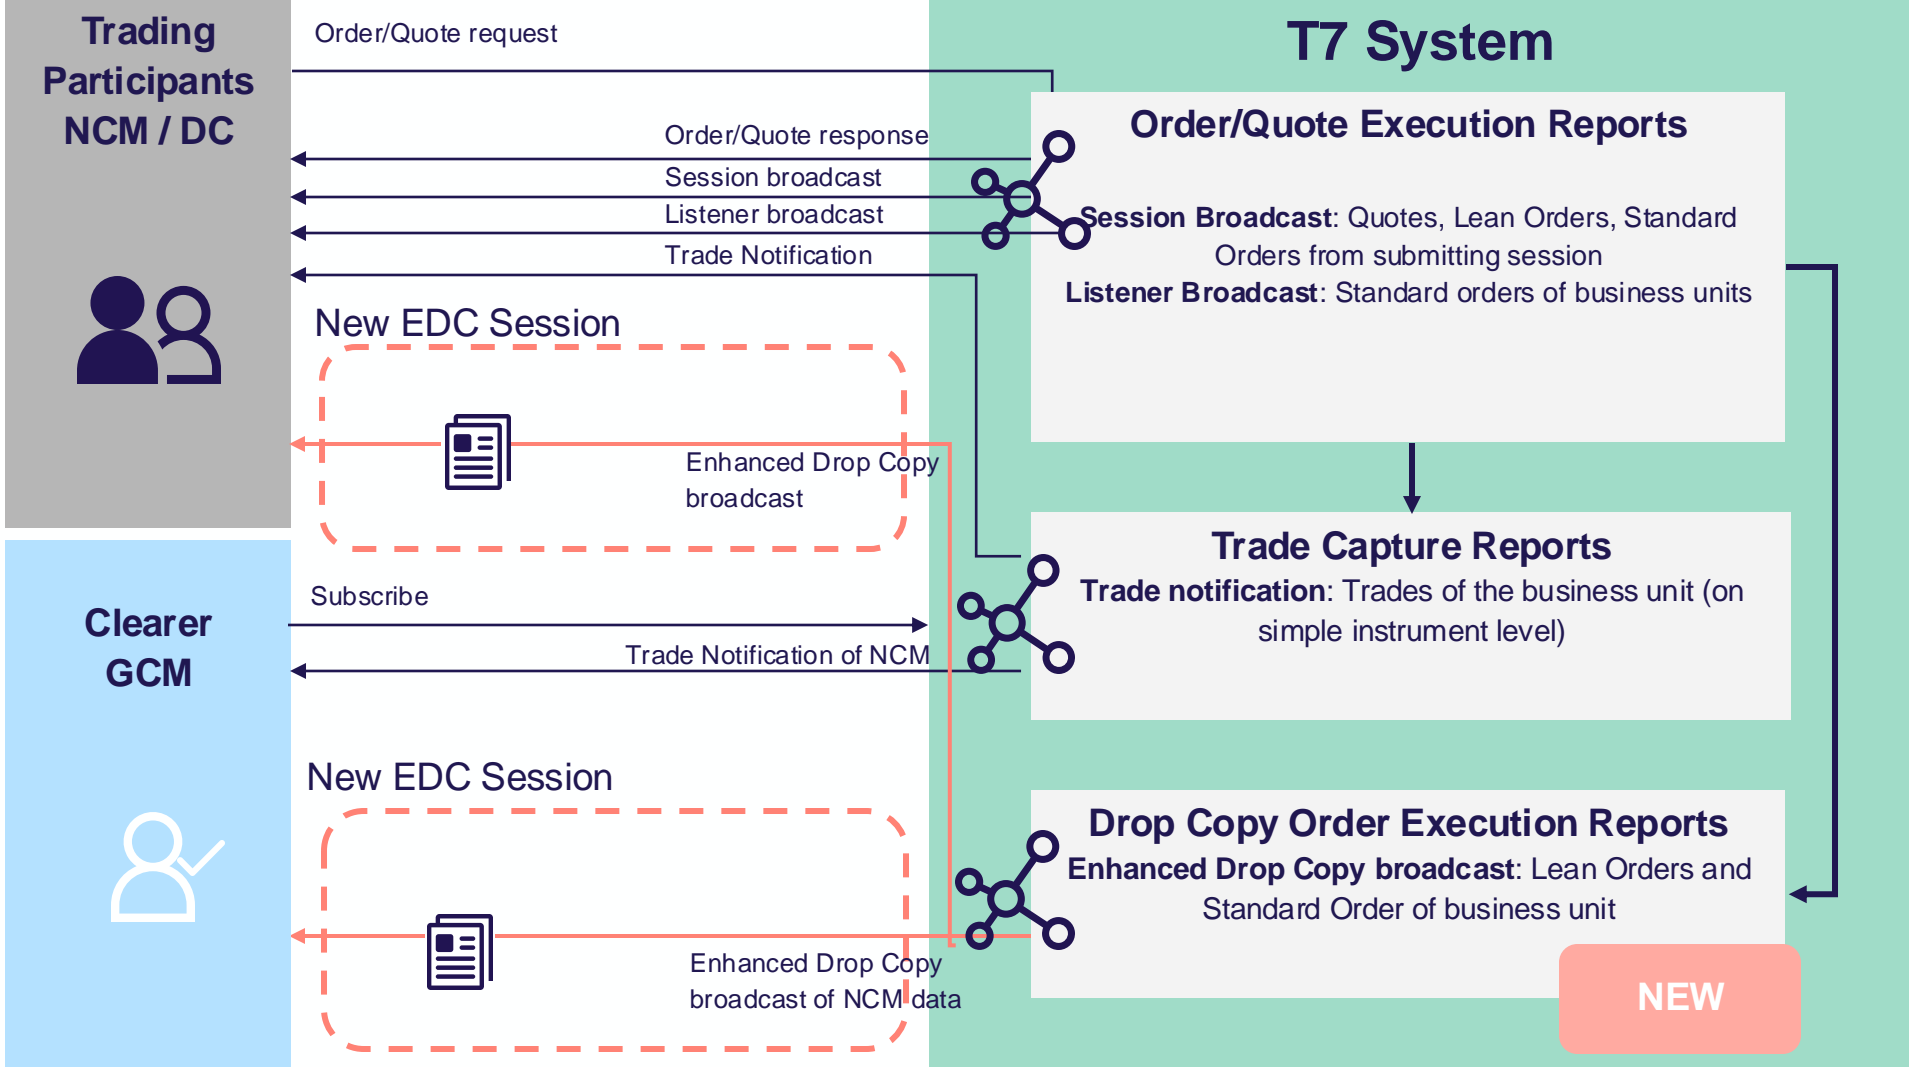

- Use case: Comprehensive view of all order activities impacting the order book. Including lean orders submitted via different trading

Improved Risk Monitoring

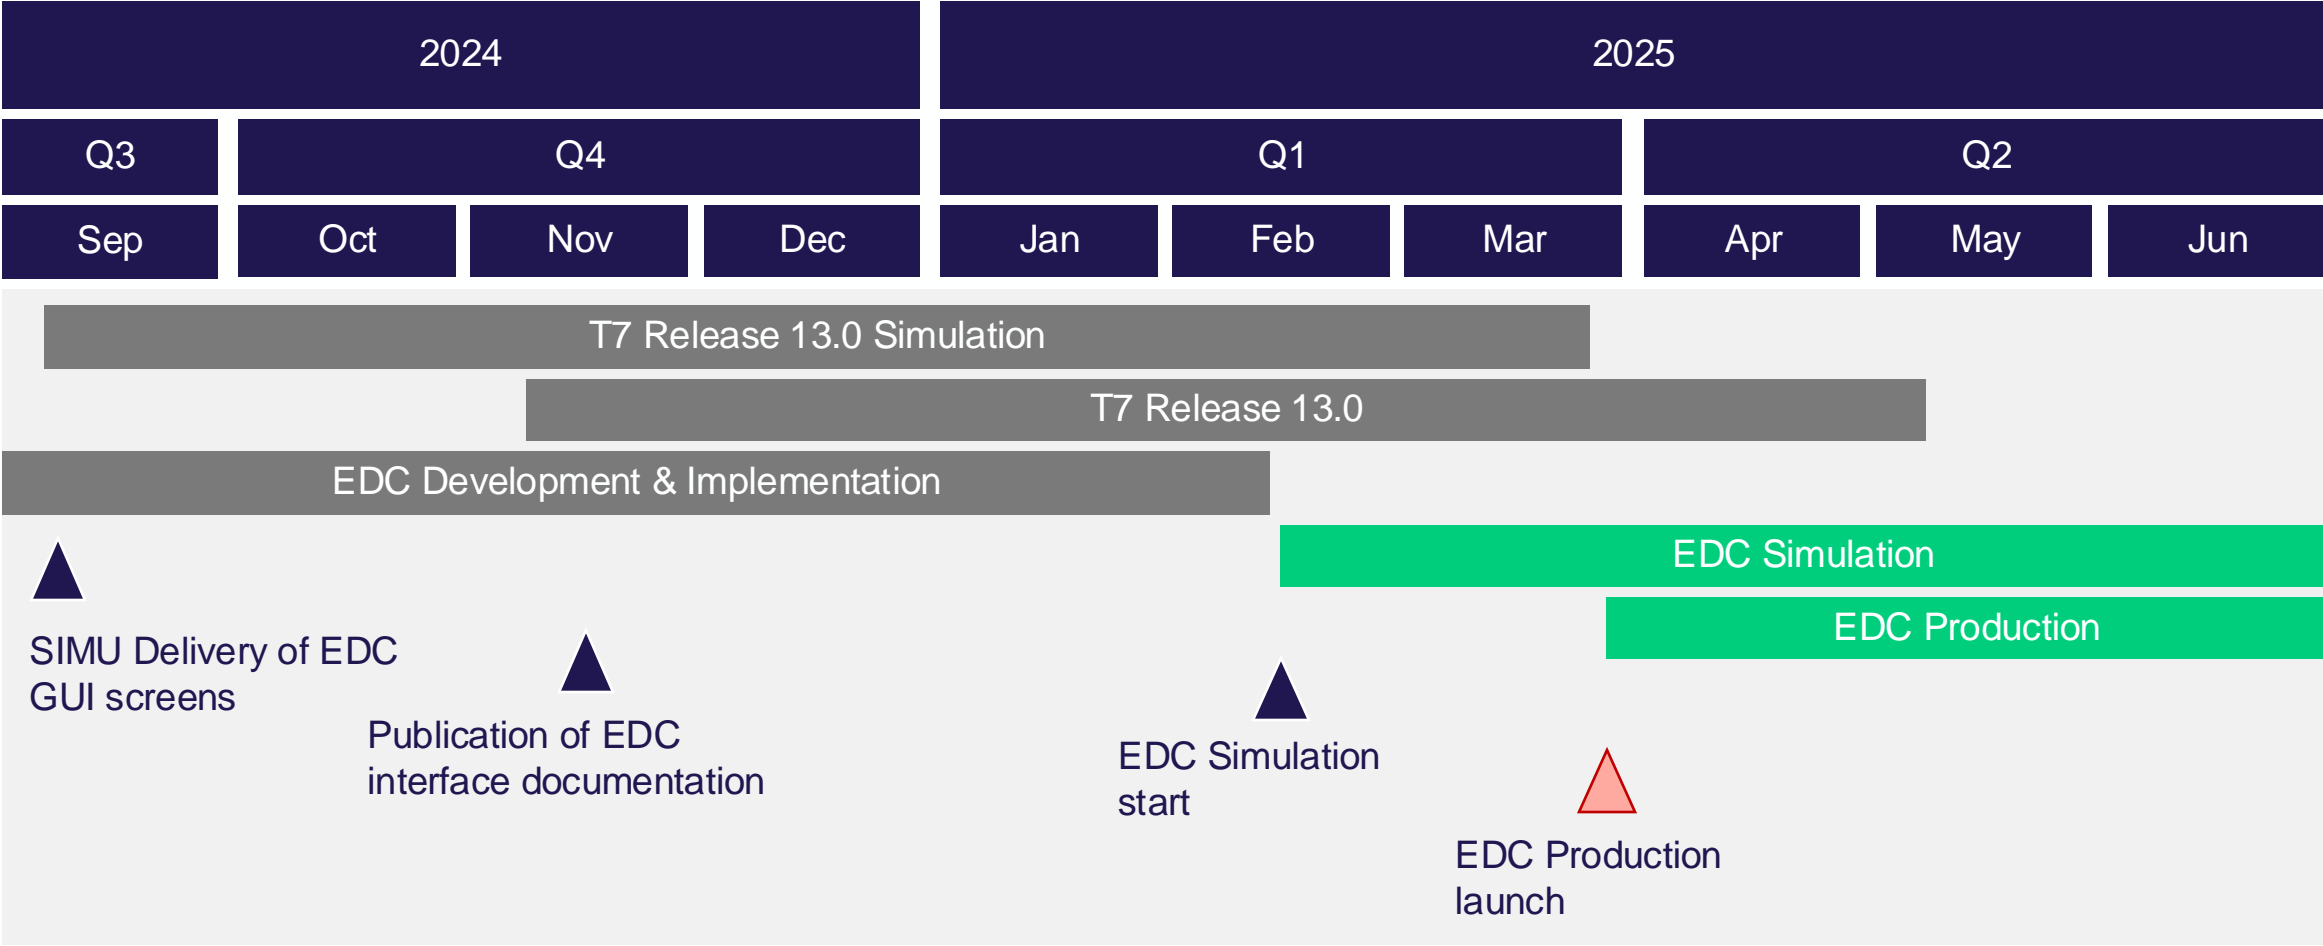

Clearing members can improve risk monitoring by **receiving order information of their NCMs**

- Use case: Monitor the activity of DC market participants and understand whether there is a technical issue on their side (e.g.: an algo malfunctioning).

Enhanced Drop Copy Workflow

Introduction Schedule Enhanced Drop Copy Service

3 BTRF Calendar Roll and Optional Early Termination

BTRF Calendar Roll and Optional Early Termination

Optional Early Termination

- BTRF baskets will be enhanced with an OET flag, which can be applied on Basket creation. A subsequent modification is not possible.
- T7 system will be enhanced by a new basket operation 'Terminate' to close a Basket trade where OET flag was set.
- Existing baskets will have the OET flag set to "false".
- New basket operations 'Terminate' will be available via GUI and ETI.

BTRF Calendar Roll

- New basket operation 'Calendar Roll' will be introduced. 'Calendar Roll' can be performed on existing Basket Trades.
- The operation combines two operations in one, unwinding an existing basket and simultaneously opening a new basket with a later expiry.
- The new basket in the later expiry will get a new Basket ID assigned to it by which it will be linked to the original basket by a new field Parent Basket ID.
- New basket operations 'Calendar Roll' will be available via GUI and ETI.

Basket Trade Entry OET Flag

- New features on GUI screens for Basket Trade Entry.
- OET flag can be set on Basket Trade creation.
- New Basket Trade operations 'Calendar Roll' and 'Terminate'.

4 Enhancements of the Short Code and Algo ID Solution 2.0

Short Code and Algo ID solution 2.0

Upload functionality

- The file format (fields) of the SC & Algo ID upload files will change.
- The file name will no longer include the trading day but the calendar day of the upload day (incl. weekends).
- eForm enhancements with new values; TR report download option; TR160/162 report display & error correction functionality.

Data processing

- The preliminary file content validations will no longer lead to rejections of the upload file on CUE level.
- The data submitted will be processed in sequence, first records received will be processed first and subsequent records will be processed using the regular logic.
- The FIFO logic allows for intraday processing of data and the provision of intraday reports.
- The new correction functionality is the basis to close gaps in the reporting where SCs were not registered until T+1 EOB.

Short Code and Algo ID solution 2.0

Data feedback

- Intraday TR reports will be provided, in addition to the EoB reports.
- New TR169 report will be introduced.
- The structure of current TR reports will change to reflect the intraday data processing.

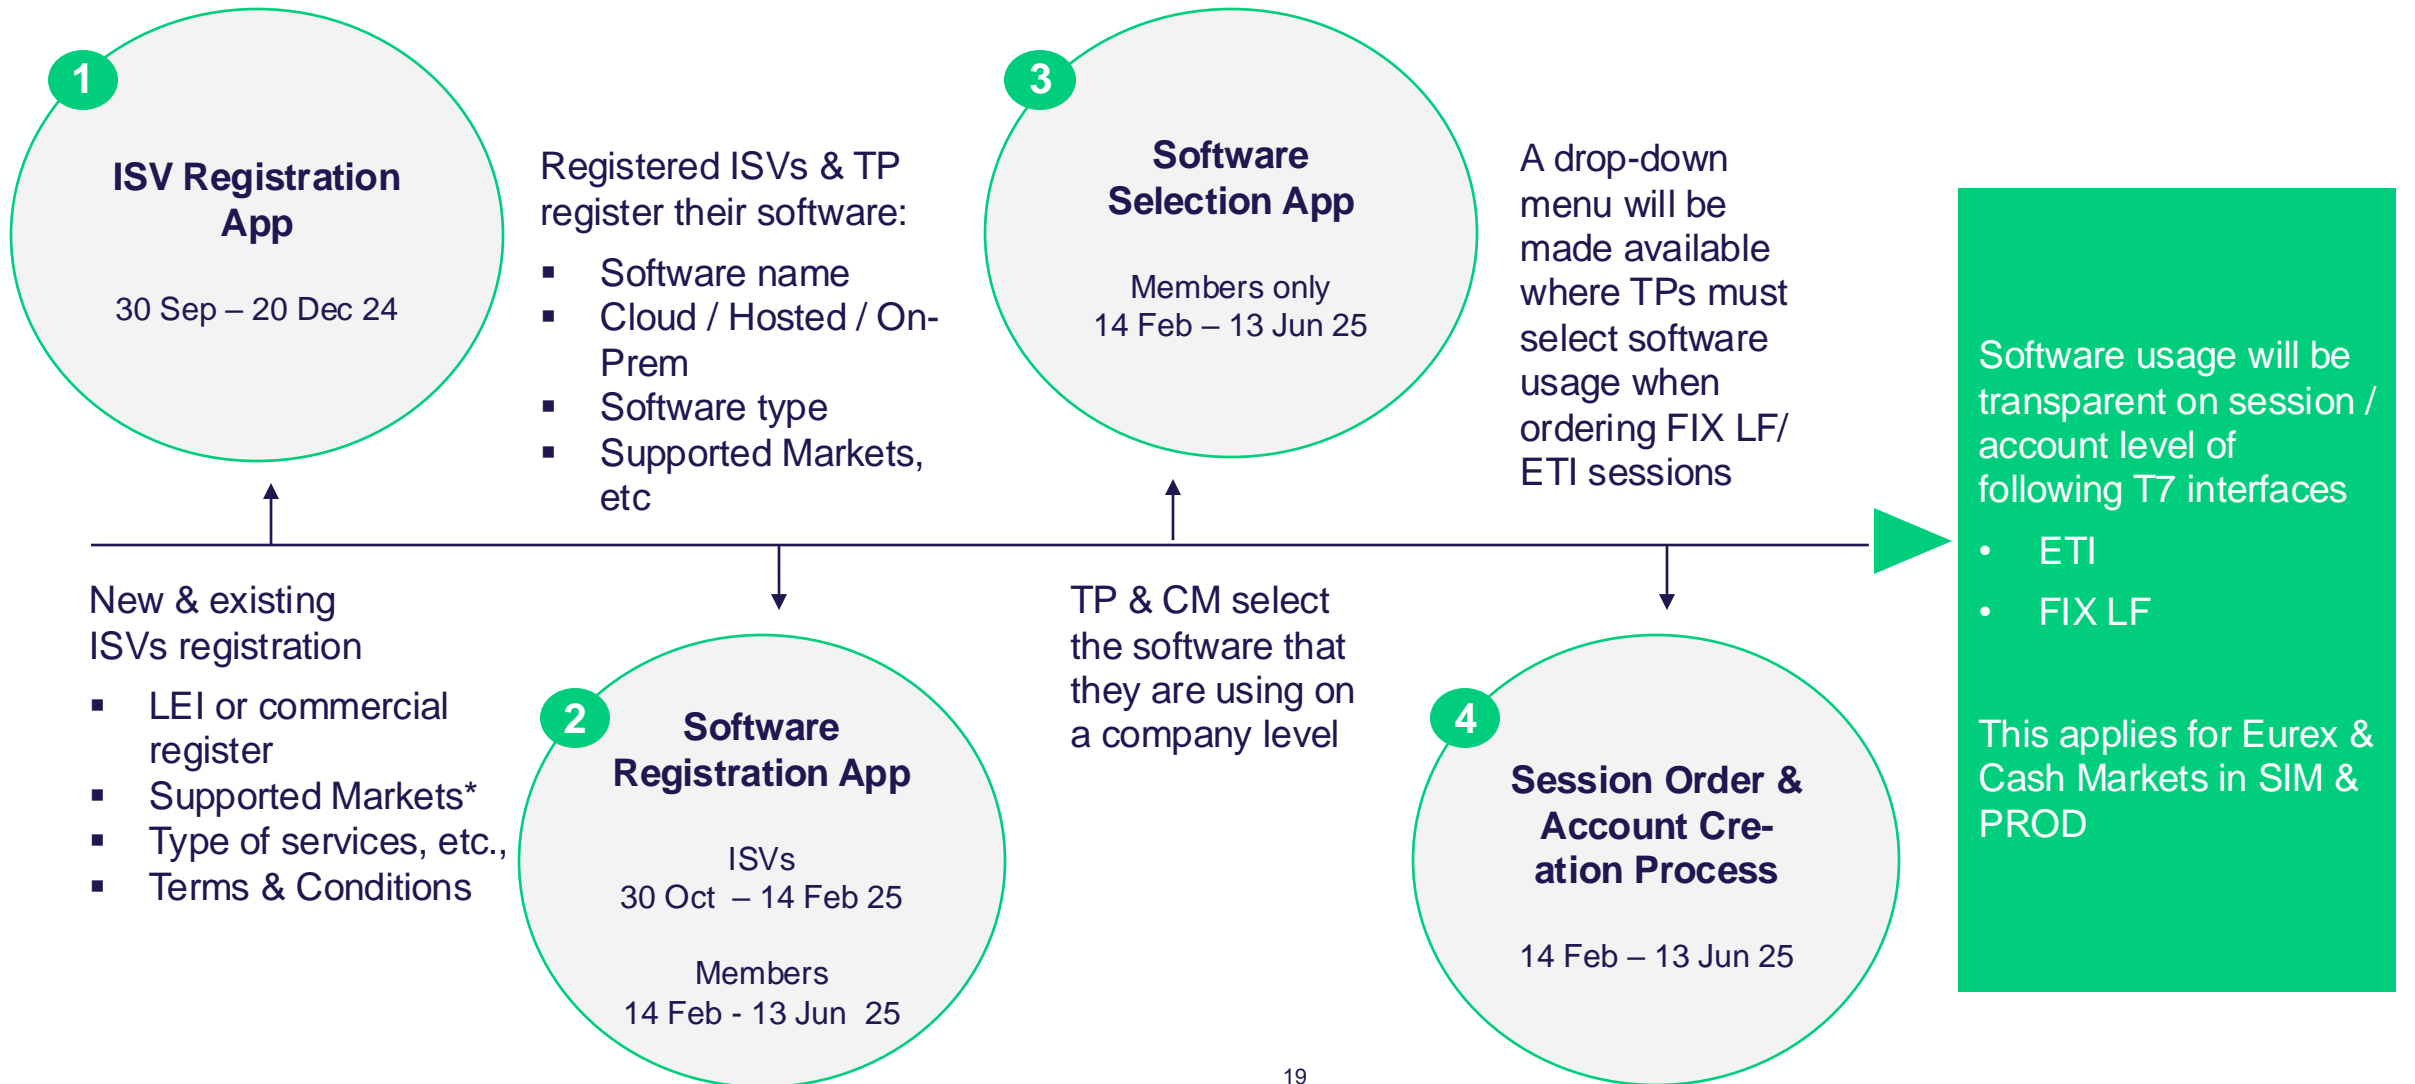

Historical data clean-up

- The new correction functionality will be used to enable a historical correction wave to close reporting gaps that occurred in the past.
- The historical correction exercise will start in February 2025 and must be completed until February 2026.
- Reporting data starting from February 2020 will be analyzed and gaps must be closed using the new correction functionality.
- New TR170 and TR171 reports will provide each exchange participant with the data sets that need to be corrected during the historical correction phase.

5 ISV and Software Registration Process via Member Section

Envisaged Solution

6 Further Changes & Enhancements

NOVS activation for Orderbook trading

NOVS in Orderbook

- Eurex expanded delta-neutral trading with **Non-Standard Option Volatility Strategies (NOVS)** in T7 Release 12.1. Unlike pre-defined OVS templates, NOVS allows creation of customized options strategies beyond OVS templates hedged with a futures leg to achieve delta neutrality.
- After the launch of Release 13.0, **Eurex will activate NOVS also for Orderbook** trading.

- Key features of NOVS
 - Options strategy design defined by trader (and not referring to strategy templates)
 - Maximum number of options legs: 6 (identical to NOS)
 - Additional futures leg to achieve delta neutrality (similar to OVS)
 - Individual options leg ratio compliant with NOVS options leg minimum and maximum quantity (replace options multiplier)
 - Minimum / maximum NOVS leg quantity: 100 / 1000 (similar to minimum and maximum values of options multiplier in OVS)
 - Pricing and matching of NOVS is based on NOS part embedded in NOVS which might result to very high overall strategy prices (compared to OVS) due to high NOVS leg ratios
 - Freely selectable futures leg ratio representing the delta of the embedded NOS part (similar to OVS)
 - Futures leg ratio validation (delta validation) for internal consistency check based on theoretical delta of options part

Further Changes and Enhancements (1/3)

Fee Identification Code Enhancement

- Currently, the fee sub-product qualifier can only be applied for instrument subtypes. Thus, it cannot be applied to all complex instruments.
- Fee code concept will be enhanced by allowing fee rebates on complex instruments w/o instrument subtypes.
- New valid value 'V' is added to the Fee Sub Product Qualifier for trades in physically settled single stock futures as underlying trades resulting from OVS or NOVS trades.

Improved TES EFP-Idx Trade Entry view in T7 Trader GUI

- T7 Trader GUI will be improved to support the entry with additionally fields and information required for EFP transactions via context information.

BTRF Basket: Allow amendment by any Third Party

- Currently, only initiating counterparties or the broker can amend an existing basket trade.
- With T7 Release 13.0, the amendments or substitutions can be triggered by any third party.
- The counterparties (Buyer and Seller) cannot be changed and will have to approve any basket amendments.

Higher max leg ratios for Non-Standard Options Volatility Strategies

- With T7 Release 13.0, it will be possible to define maximum leg ratios NOVS up to a value of 9999.

Further Changes and Enhancements (2/3)

Usage of TLS 1.3 for ETI LF and FIX LF

- Due to improved security features, an upgrade to Transport Layer Security (TLS) version 1.3 is highly recommended for all participants' ETI LF and FIX LF gateway connections.
- At a later point in time after T7 Release 13.0 introduction, TLS version 1.2 will no longer be supported, and version 1.3 will become mandatory.

RDF files available on the Common Report Engine (CRE) on Saturdays

- With T7 Release 13.0, the RDF files for Monday (respectively the next business day after the weekend) will be created and made available on the Common Report Engine on Saturday, in addition to the creation of the file on Sunday evening/Monday morning.

SenderCompID in EMDI packetHeader will be extended

- The size of the SenderCompID in the EMDI packetHeader will be increased from one to two bytes to extend the supported number range.

MiFID field for Risk Reduction made available for optional use

- With T7 Release 13.0, the existing MiFID field for Risk Reduction will be made available for optional use in order entry, CLIP and TES requests.

Further Changes and Enhancements (3/3)

Pre-Trade Risk Limit consumption of options with decimals

- The Pre-Trade Risk Limit (PTRL) consumption of options will no longer be displayed as integers but will have at least two decimals. Fields such as NetPosition, OpenShort, and OpenLong in the ETI or FIX interfaces or in GUI views will display decimals for options.

Market Maker Protection: Quotes inactivation or deletion

- The participants will be able to choose between two different types of consequences of a Market Maker Protection event. It will be possible to choose between either an inactivation of quotes only, or an inactivation followed by an immediate deletion of the quotes.

Dissemination of TES trades statistics also via EMDI and EOBI

The number of buyers and sellers in TES trades, i.e., the number of deal sides in TES trades, will be disseminated via EMDI and EOBI, as it is currently disseminated via T7 Trader GUI in the TES Time & Sales view.

Questions / Answers

A glowing lightbulb with a wireframe cage around it, set against a dark teal background. The lightbulb is illuminated from within, casting a warm, golden glow. The wireframe cage is made of thin, dark lines that form a cube-like structure around the bulb. The background is a dark teal color with a subtle gradient.
